

# UPLOAD IMAGE TO IBM CONTAINER REGISTRY

Team ID	PNT2022TMID26994
Project Name	Inventory Management System for Retailers

The screenshot shows the IBM Cloud Container Registry interface in a web browser. The URL is `cloud.ibm.com/registry/namespaces`. The left sidebar shows the 'Namespaces' section selected under 'Quick start'. The main content area displays a table of namespaces. The table has columns for Name, Resource group, Repository count, Image count, and Retention policy. A single namespace named 'kosu' is listed under the 'Default' resource group. The interface includes a search bar, a 'Create' button, and pagination controls at the bottom of the table.

Name	Resource group	Repository count	Image count	Retention policy
kosu	Default	1	1	Retain all images

# INVENTORY MANAGEMENT

## About:

Inventory management helps companies identify which and how much stock to order at what time. It tracks inventory from purchase to the sale of goods. The practice identifies and responds to trends to ensure there's always enough stock to fulfill customer orders and proper warning of a shortage.

One measurement of good inventory management is inventory turnover. An accounting measurement, inventory turnover reflects how often stock is sold in a period. A business does not want more stock than sales. Poor inventory turnover can lead to deadstock, or unsold stock.

Inventory is the raw materials, components and finished goods a company sells or uses in production. Accounting considers inventory an asset. Accountants use the information about stock levels to record the correct valuations on the balance sheet.

Inventory is often called stock in retail businesses: Managers frequently use the term "stock on hand" to refer to products like apparel and housewares. Across industries, "inventory" more broadly refers to stored sales goods and raw materials and parts used in production. Some people also say that the word "stock" is used
